

MODEL ROAD RACE GAME WITH SENSOR MATS

ABSTRACT OF THE DISCLOSURE

[0053] A method and apparatus for determining the location of a particular model vehicle. Position detector elements are placed around a game area where the vehicles will travel. Transmissions between the vehicle and a position detector element it passes allow the ID of one to be sent to the other. Then either the position detector element or the vehicle transmits a message to a controller with both the ID of the vehicle, and the ID of the position detector element, allowing the determination of which vehicle is where.
